The best comprehensive text on cardiology

By C. MAN

Having tried Mayo clinic review and Braunwald, I regret that I haven't come across this book till this point in my learning. Mayo clinic is sometimes too brief and offers little explanation, being a little bit disorganized in a couple of chapters; Braunwald is well-known as THE textbook in cardiology, but the extensive reference to literature on figures and percentages has significantly diluted the content and made the text equivocal in many places. Crawford nicely strikes a balance, being clear without being simplistic, comprehensive without being encyclopedic. The color layout with plenty of illustrations makes it even more readable. Though intended to be a textbook, I highly recommend this book for anyone preparing for the cardiology board.

Incomplete

By Justin Reilly, JD

Only mention of ME (CFIDS) is re orthostatic intolerance. ME patients also have reduced ejection, low blood volume, cardiomyopathy and increased cardiac disease mortality. When ME patients die of heart disease, it is, on average, at an age 25 years younger than that of the whole population of people who die of heart disease.

Exercise treadmill test to exhaustion is highly contraindicated for ME patients.
