MATLAB enables you to work with its graphics capabilities in almost all areas of the experimental sciences and engineering. The commands that MATLAB implements in job related graphics are quite useful and are very efficient.

MATLAB has functions for working with two-dimensional and three-dimensional graphics, statistical graphs, curves and surfaces in explicit, implicit, parametric and polar coordinates. It also works perfectly with twisted curves, surfaces, volumes and graphical interpolation. MATLAB Graphical Programming addresses all these issues by developing the following topics:This book is a reference designed to give you a simple syntax example of the commands and to graph it so that you can see the result for:

Nice book for Matlab Graphics
By Namir C. Shammas
I was able to purchase a pdf file directly from the publisher. I spent some time going over the graphics commands in the book to create my own personal quick reference. I am happy that I was able to get the information that suited my needs. If you are looking for a book that teaches you to work with the wealth of graphics commands in Matlab, then this is one of these books. The author does a good job in covering the diverse two and three dimensional graphics commands using short examples that hit the point. You need not read the entire book to benefit from the coverage of graphics commands. Instead you can zoom in the

sections that present the commands for the graphs you intend to draw. The author also includes the family of ez-commands (like ezplot, ezsurf, and ezcontour to name a few) that help you to quick draw curves, surfaces, and contours using equations instead of vectors of data points. He also lists summaries of the commands by categories. I found that to be very helpful. You can invoke the commands directly from the history window or you can place the commands in Matlab scripts and functions. I recommend this book for new Matlab programmers and users that want to draw nice looking graphs that can enhance their reports and presentations.
